

JavaScript Array Methods

Tasks:

1. Get the value "Volvo" from the `cars` array.

```
const cars = ["Saab", "Volvo", "BMW"];  
let x = ;
```

2. Alert the number of items in an array, using the correct Array property.

```
const cars = ["Volvo", "Jeep", "Mercedes"];  
alert();
```

3. Use the correct Array method to add "Kiwi" to the `fruits` array.

```
const fruits = ["Banana", "Orange", "Apple"];  
;
```

4. Use the `splice()` method to remove "Orange" and "Apple" from `fruits`.

```
const fruits = ["Banana", "Orange", "Apple", "Kiwi"];  
fruits.splice(, );
```
