JavaScript Dates Methods

Tasks:

1. Create a Date object and alert the current date and time.

```
const d =            ;
alert(d);
```

2. Use the correct Date method to extract the year (four digits) out of a date object.

```
const d = new Date();
year =            ;
```

3. Use the correct Date method to get the month (0-11) out of a date object.

```
const d = new Date();
month =            ;
```

4. Use the correct Date method to set the year of a date object to 2020.

```
const d = new Date();
d.            ;
```
