JavaScript String Methods

Tasks:

1. Use the length property to alert the length of txt.

```
let txt = "Hello World!";
let x =            ;
alert(x);
```

2. Use escape characters to alert We are "Vikings".

```
let txt = "                    ";
alert(txt);
```

3. Convert the text into an UPPERCASE text:

```
let txt = "Hello World!";
txt = txt.          ;
```

4. Use the correct String method to replace the word "Hello" with the word "Welcome".

```
let txt = "Hello World";
txt = txt.       ("Hello", "Welcome");
```

5. Convert the value of txt to upper case.

```
let txt = "Hello World";
txt =            ;
```
